PPP is purchasing power parity; an international dollar has the same purchasing power over GDP as a U.S. dollar has in the United States. PPP figures are extrapolated in WDI from 2021 benchmark results by the International Comparison Program (ICP), unless otherwise footnoted. For OECD and Eurostat countries, PPP figures are sourced from their annual PPP programs.

Note: Table list 217 economies, but rankings include only those with confirmed GNI per capita estimates for at least one year during the last three years period. Figures in italics are for 2022 or 2021.

a. Data are for the area controlled by the government of Cyprus. b. PPP is extrapolated from regression-based estimates. c. Based on data from official statistics of Ukraine and Russian Federation as well as the United Nations; by relying on these data, the World Bank does not intend to make any judgment on the legal or other status of the territories concerned or to prejudice the final determination of the parties' claims. d. Excludes Abkhazia and South Ossetia. e. Includes Western Sahara. f. Excludes Transnistria. g. Covers mainland Tanzania only. h. PPP is extrapolated from time series estimates based on previous benchmark data by the ICP. i. Not classified
